

Trying to decide between a laptop and a tablet device?

As a leader in financing solutions for your home, Synchrony Financial created this comparison of two hot, portable technologies.

MEMORY – If you're planning to use the device for web surfing, photo management and streaming movies, either will do. If you're planning to run complex programs or edit photos or video, you might lean toward a laptop with more memory and a high-resolution screen.

RESOLUTION – Tablets are great for binging on shows and movies and generally have high-quality screens. Laptops can also offer high resolution, but with clamshell design and keyboards, watching shows or surfing can be more cumbersome.

ON THE GO – If you plan to carry this device like you do a phone, then you'll want to consider weight and size. Most laptops range between 3 and 6 pounds. Most tablets are small, lightweight and can be tucked away and carried along with ease.

While you are debating, did you know you can use your Synchrony HOME™ credit card to finance your computer or tablet purchase?* **Apply today at www.mysynchrony.com/welcomehome.**
